

The Client: Financial Services Industry.

The Purpose: Operational efficiency for customers and users.

The Method: At Marjolo we engage in agile software development practices, favouring value-delivery for development id complex web-based applications. In delivering this cutting-edge Open Banking web-solution, we faced rapidly evolving user requirements. We expedited decision making, embedding stakeholders in the process and revisiting the vision to ensure objective alignment throughout each iteration's release. We built software iteratively, operating Scrum planning processes with daily stand-ups. 1 week sprint tests were managed with Atlassian Jira agile project tracking software, including product backlog and KanBan Board.

The Result: A live solution, delivering a 10-day operational efficiency for customers versus previously existing manual processes.
